

Counsler Meeting

Project focus:

Internet of Things.

Think about how to make the general coverage – This is good to discuss in the report.

But remember you can only focus on a few aspects, where you can make a prototype of the system.

Identify roles, they will be given different services. Ex. Resident and guest.

Smart Home is our project focus.

Report:

First give a main overview of the system, show the control flow and how everything is supposed to work together. – Architecture

Then give more detail about the things you have used a lot of time on.

For the “work”-techniques, just use one page for that, it’s not that important.

You can make the analysis briefer than you usually do.

The demands are more technical demanding now that you are master students.

When you are writing a master thesis you have to be able to write from start to finish, why this is important, what it can help on, and keep the reader interested.

Meetings:

Define the meetings on when we have finished some part of progress.

Huo can meet us weekly or bi-weekly as long as he is here.

Huo wants something to read at least 2 days before the meeting.

Meetings will become more frequent as we go on.

Reminders:

Remember to do labor division.

Communicate well, so that everyone knows what everyone does. – Else you will need more time to catch up.

Set up some rules about when you need to meet, group meetings, get up in the group room and such.
